

After login
user will see
AWS groups

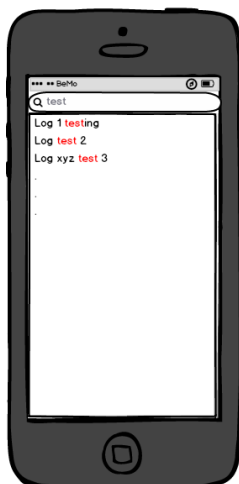

Select desired
Group to see
Streams in
separate/detail
view.

Select desired
stream to see logs
in separate/detail
view.

User will be able to see his few
previous queries as suggestion
based on entered keyword to
search. This will be local search

1. If no user query, we can show tail logs from selected
stream or latest logs at bottom.
2. User will search for query and result will be shown
from server response.
We can highlight word (red, yellow) from logs which are
matching with query word.
